## **AEgis Technology Group Selects DiSTI's GL Studio<sup>®</sup> Software as HMI Tool for Use in BattleStorm Product**

**Orlando, FL August 14, 2007** – DiSTI, a global leader in Human Machine Interface (HMI) development, today announced that AEgis Technologies has selected GL Studio as the HMI development tool for use in their BattleStorm product. BattleStorm provides the simulation marketplace with a low cost, commercially available framework upon which users can integrate ground, air, infantry and other training environments into a single platform.

Most recently, AEgis used GL Studio in conjunction with BattleStorm to create the customized control panels for Northrop Grumman's Directed Energy Weapons System Trainer. GL Studio enabled AEgis' programmers and developers to build the high-fidelity fully interactive graphical controls Northrop required for the trainer, a solid-state laser system mounted on a combat vehicle used by U.S. ground forces.

According to David King, Director of Simulation Development for AEgis Technology Group, GL Studio fully complemented its BattleStorm solution during the development process and played a key role in successfully fulfilling the contract with Northrop.

"DiSTI went the extra mile equipping us with exactly what we needed to demonstrate the GL Studio development environment to Northrop," says King. "DiSTI's sales staff and technical support were first class. We needed a tool that would work as advertised, along with a responsive software support team. GL Studio exceeded our expectations and helped us successfully deliver the trainer on time and under budget."

“We are honored to have been selected by David and AEGis Technologies for this product integration”, says Joe Swinski President of DiSTI. “David King is a well respected and trusted member of the simulation and training community. AEGis Technologies has been a leading provider of quality modeling and simulation software products for almost 20 years. To have our products chosen by this caliber of clientele is an honor and a privilege.”

### **About AEGis Technologies**

The AEGis Technologies Group, Inc. provides next-generation modeling and simulation (M&S) software for the pharmaceutical/risk assessment, industrial process, automotive, and military/aerospace markets. AEGis supports its customers with software, training and consulting services throughout Europe, Asia, and the Americas. AEGis corporate headquarters are located at 631 Discovery Drive, Huntsville, AL 35806; Tel: 256-922-0802; Fax: 256-922-0904; Web: [www.aegistg.com](http://www.aegistg.com)

### **About DiSTI**

DiSTI is a global leader in the development of Human Machine Interface software for businesses, governments and the military. The company’s flagship products, GL Studio and GL Studio for Java, enable programmers and developers to build high-fidelity graphics, 3D simulations and fully interactive controls into their models, enhancing the level of realism and sophistication, while improving learning and retention.

More than 300 customers worldwide including BAE, Boeing, Dassault, FedEx, Lockheed Martin, Honeywell, Raytheon and Thales use DiSTI solutions to build maintenance trainers, create PC and Internet-based courseware and to develop components for safety-critical applications. As a full service provider, DiSTI offers a complement of custom programming and development services, and is the recognized leader in training solutions for the global simulation and training community.
